

Ganro Introduces Manual Horizontal Index Table

WAKEMAN, Ohio (November 19, 2010) – Ganro Industrial Corporation, long time producer of rotary tables and indexers, has introduced the GCT Series manual horizontal index table.

GCT-800

The GCT manual horizontal index table is an affordable uncomplicated approach to add indexing capability to a horizontal boring mill. The index table clamps and unclamps with pneumatics. It has a two piece Hirth coupling design which ensures high indexing accuracy and allows for heavy cutting forces. The GCT boasts easy operation.

- Unclamp the table by pressing the red button.
- Manually index the table with the included handle to the desired degree.
- Clamp the table by pressing the red button again.

The GCT standard table top dimensions range from 12" to 55" square with custom table top dimensions and t-slot designs available. The GCT manual horizontal index tables are available with 1° or 5° minimum indexing capability.

Add flexibility and productivity to your shop by adding a manual horizontal index table. For detailed information on what GCT table meets your requirements, contact Ganro's exclusive agent, CNC Indexing & Feeding Technologies.
